

Technical case study

Stodarts Solicitors and Notaries

Stodarts Solicitors and Notaries have been providing expert legal advice for over 100 years, with their IT infrastructure managed by our technical team.

Their highly skilled staff of solicitors offer a wide range of legal services with the aim of providing a modern yet tailored experience for their customers.

The requirements

We have a well-established relationship with Stodarts, dating back to our legacy brand Castle Computer Services. Our technical team provide Stodarts with a fully managed IT and support service, collaborating with them on all aspects of their IT strategy, from their current environment to their roadmap for the future.

Most recently, we have been working with Stodarts to modernise their workplace and help them create a more collaborative, efficient and flexible working environment based on the Microsoft platform.

The solution

Our solution was to deliver Microsoft's Modern Workplace into Stodarts, beginning with their Office 365 migration journey and resulting in a cloud based, collaborative, and secure IT environment.

We implemented:

- / A range of Office 365 services and applications, including Microsoft Teams, Forms and Planner
- / Secure infrastructure agreed, reducing on-premise requirements with adoption of cloud-based services
- / Remote access solutions to enable flexibility for employees who now have to work from home
- / Continuous monitoring of their IT environment

With Office 365 and migration to the cloud, Stodarts have received a comprehensive collaboration and communication platform. They are now able to function as a truly Modern Workplace with benefits including:

- / Increased efficiency of existing software and improvements in employee productivity
- / An environment that's quickly and easily scalable
- / The ability to work from anywhere, anytime
- / Peace of mind with the most up to date Microsoft security controls

“As a trusted advisor of many years we engaged with Kick to begin our journey to the cloud. With Microsoft 365 in place we have been able to utilise a wide range of modern applications including Microsoft Teams, which given the current climate, has been hugely valuable with our firm's communication and collaboration.”
