Managed DMARC/DKIM Service

In today's digital landscape, email security is not just an option - it's a necessity.

With the increasing sophistication of cyber threats, safeguarding your email communications is critical.

Our Managed DMARC/DKIM Service helps organisations strengthen email security by implementing and managing email authentication controls that protect against spoofing and phishing attacks. The service improves email deliverability, helps legitimate messages reach inboxes, and provides greater visibility into how your domain is being used, reducing risk and maintaining trust in your communications.

What's included

- ✓ **Initial Setup and Configuration:** We take care of the entire setup process, from verifying your domain to configuring your DMARC and DKIM policies for optimal security.
- ✓ **Monitoring and Management:** Our team continuously monitors your email traffic and DMARC reports, ensuring that your email authentication standards are always met.
- ✓ **Reporting and Analysis:** Receive regular reports with actionable insights, allowing you to make informed decisions about your email security policies.
- ✓ **Technical Support:** Access our team of email security experts for support and consultation, ensuring your DMARC and DKIM settings are always optimised.

Why choose
Kick?

Kick provides the expertise and ongoing support needed to secure your email environment, improve deliverability and reduce the risk of spoofing and phishing, helping you maintain trust in every email you send.

Features and benefits

Comprehensive Email Security

Our service implements DMARC and DKIM protocols to authenticate your email senders, drastically reducing the risk of email spoofing and phishing attacks.

Improved Deliverability

By establishing a trustworthy reputation for your domain, our service ensures higher email deliverability rates, ensuring your messages reach their intended recipients.

Validate & Support

Gain valuable insights into your email traffic with detailed reports on authentication results, helping you identify and respond to potential security threats.

Reputation Protection

Stay compliant with industry standards and improve your domain's reputation, enhancing your organisation's overall security posture.
