Proactive Perimeter Security for Modern Businesses

Kick's Managed Firewall service leverages next-generation Fortinet technology to deliver robust perimeter security and protect your organisation from evolving cyber threats. Fully managed by our security specialists, the service ensures your firewall remains optimised, up to date and providing continuous protection.

Combining advanced threat prevention, application-level security and network visibility, the solution helps safeguard critical business systems while delivering reliable performance and simplified security management.

Subscription Management

- ✓ **Threat Prevention:** Provides advanced protection against known and emerging cyber threats by continuously monitoring network traffic and blocking malicious activity in real time. Designed to deliver robust security without compromising network performance.
- ✓ **Advanced URL Filtering:** Protects users from malicious websites, phishing attacks and web-based threats through real-time URL analysis and threat intelligence. Helps reduce risk while supporting safe and secure internet access across your organisation.
- ✓ **DNS Security:** Uses machine learning and advanced threat intelligence to identify and block malicious domains before a connection is established. This proactive approach helps prevent malware infections, phishing attacks and other DNS-based threats while providing greater visibility into security events.

Why choose Kick?

With a dedicated team of security and networking specialists, Kick combines leading Fortinet technology with proactive management and expert support to help organisations protect critical systems, reduce risk and maintain a resilient network.

Features and benefits

Application Visibility & Control

Identify and categorise applications across all ports with full Layer 7 inspection, providing greater visibility and control over network activity.

Encrypted Traffic Inspection

Detect and prevent malicious activity hidden within encrypted traffic, helping to reduce risk without impacting network performance.

Advanced Threat Protection

Leverage cloud-delivered security services to identify and block sophisticated threats before they can impact your organisation.

Centralised Management & Visibility

Simplify security administration with centralised management, reporting and visibility across your network environment.

Kick's responsibilities

- ✓ Manage access to website categories through web filtering policies.
- ✓ Control access to approved and restricted websites.
- ✓ Filter web traffic using category-based access controls.
- ✓ Control website access through managed web filtering.
- ✓ Manage web access with tailored filtering policies.
