

KickSecure Standard

Gain Greater Visibility Across Your Threat Landscape

Cyber threats continue to evolve, making visibility across your digital environment more important than ever. KickSecure Standard provides continuous monitoring, reporting and insight across your cloud services, helping you identify potential risks, prioritise security efforts and respond more effectively to emerging threats.

By delivering greater visibility into your security posture, we help you make informed decisions, strengthen cyber resilience and maintain confidence in your organisation's defences.

Why KickSecure Standard?

- ✓ **Increase Security Visibility:** Gain greater insight into your cloud environment through continuous monitoring, reporting and visibility of potential security risks. Understand where vulnerabilities exist and maintain a clearer view of your overall security posture.
- ✓ **Prioritise Security Efforts:** Identify weaknesses and focus resources where they will have the greatest impact, helping to reduce risk and improve security posture. Actionable insights help you make informed decisions and prioritise remediation activities effectively.
- ✓ **Proactive Threat Management:** Benefit from actionable alerts and intelligence that enable faster identification, investigation and response to emerging threats. By detecting potential issues early, you can take a more proactive approach to protecting your organisation.

Features and benefits

Comprehensive Monitoring

KickSecure Standard constantly observes your system's configuration, ensuring alignment with evolving vendor recommendations and industry standards. By benchmarking against reputable organisations like CIS and Microsoft, we identify potential vulnerabilities that could be exploited by cybercriminals.

Reporting

We monitor for suspicious configuration changes, such as unusual administrative role assignments, which could indicate the onset of a cyber attack. Early detection allows for quick intervention, stopping attackers in their tracks before they can cause harm.

KickSecure Score

Transparency is key to robust cybersecurity. Our monthly reports provide a detailed overview of your infrastructure's security posture, highlighting any gaps and recommending actionable steps for improvement. The KickSecure Score, a unique feature of our service, offers a concise metric to track your security progress over time.

Whats included

KickSecure Standard forms a core part of Kick's support services, helping organisations gain greater visibility into their security posture and identify potential risks before they become issues. Available as a standalone service, it provides the monitoring, reporting and insights needed to support a proactive approach to cyber security.

Designed to make advanced security accessible and straightforward, KickSecure Standard helps organisations prioritise remediation efforts, improve visibility and strengthen their overall cyber resilience.

- ✓ Continuous monitoring helps identify potential risks and maintain visibility across your environment.
- ✓ Regular reports provide clear insights into your security posture and key areas for improvement.
- ✓ A simple security score helps track progress and measure improvements over time.
- ✓ Supports compliance efforts through enhanced visibility, reporting and security oversight.
- ✓ Security controls can be tailored to meet your organisation's specific requirements and risk profile.

Prerequisites

Microsoft 365 Business Premium or Equivalent

For cloud environment monitoring and reporting.

Administrative Access

Required for initial setup and periodic checks.

Why choose Kick?

With a dedicated team of cyber security specialists and technical experts, Kick delivers proactive security management, actionable insights and guidance to help organisations strengthen security, reduce risk and build long-term cyber resilience.
